

Aquí seleccionamos la Iso, y el sistema operativo de la máquina virtual

Luego seleccionamos la cantidad de recursos (memoria, procesadores), que queramos que la máquina obtenga para su funcionamiento

Luego aquí cambiamos el tipo de red a adaptador puente

Aquí la máquina ya está terminando de configurarse

```

```

Actualizamos y mejoramos la máquina

```
root@ubuntu:/home/ChrisUser# apt install apache2 -y
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
apache2 is already the newest version (2.4.58-1ubuntu8.8).
apache2 set to manually installed.
The following package was automatically installed and is no longer required:
  libllvm19
Use 'sudo apt autoremove' to remove it.
0 upgraded, 0 newly installed, 0 to remove and 1 not upgraded.
```

Instalamos el servidor de apache

```
root@ubuntu:/home/ChrisUser# service apache2 start
```

Lo iniciamos

```
root@ubuntu:/home/ChrisUser# systemctl status apache2
● apache2.service - The Apache HTTP Server
   Loaded: loaded (/usr/lib/systemd/system/apache2.service; enabled; preset: enabled)
   Active: active (running) since Fri 2025-10-03 07:31:15 UTC; 10min ago
     Docs: https://httpd.apache.org/docs/2.4/
 Main PID: 1208 (apache2)
    Tasks: 6 (limit: 4603)
   Memory: 20.8M (peak: 21.7M)
      CPU: 224ms
     CGroup: /system.slice/apache2.service
             └─1208 /usr/sbin/apache2 -k start

Apache2 Default Page

It works!

This is the default welcome page used to test the correct operation of the Apache2 server after installation on Ubuntu systems. It is based on the equivalent page on Debian, from which the Ubuntu Apache packaging is derived. If you can read this page, it means that the Apache HTTP server installed at this site is working properly. You should **replace this file** (located at `/var/www/html/index.html`) before continuing to operate your HTTP server.

If you are a normal user of this web site and don't know what this page is about, this probably means that the site is currently unavailable due to maintenance. If the problem persists, please contact the site's administrator.

Configuration Overview

Ubuntu's Apache2 default configuration is different from the upstream default configuration, and split into several files optimized for interaction with Ubuntu tools. The configuration system is **fully documented in `/usr/share/doc/apache2/README.Debian.gz`**. Refer to this for the full documentation. Documentation for the web server itself can be found by accessing the **manual** if the `apache2-doc` package was installed on this server.

The configuration layout for an Apache2 web server installation on Ubuntu systems is as follows:

```
/etc/apache2/
|-- apache2.conf
|   '-- ports.conf
|-- mods-enabled
|   |-- *.load
|   '-- *.conf
|-- conf-enabled
|   '-- *.conf
|-- sites-enabled
|   '-- *.conf
```

Esta es la información del apache

```
</div></body></html>root@ubuntu:/home/ChrisUser# apt install nginx -y
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done.
The following package was automatically installed and is no longer required:
  libllvm19
Use 'sudo apt autoremove' to remove it.
The following additional packages will be installed:
  nginx-common
Suggested packages:
  fcgiwrap nginx-doc
The following NEW packages will be installed:
  nginx nginx-common
0 upgraded, 2 newly installed, 0 to remove and 1 not upgraded.
Need to get 564 kB of archives.
After this operation, 1,596 kB of additional disk space will be used.
